

WOOD-SKIN

Wall'in

Wall'in is pleased to present its Wood-Skin range. These panels are laminated with the addition of a textile membrane in the middle allowing to combine the solidity of the traditional materials with a real flexibility. You can dress both : furniture and architectural elements. Wood-Skin is a digital concept that allows rigid materials to adopt a three-dimensional appearance, thus freeing them from their smooth and simple shape.

With Wood-Skin, your projects are studied and designed according to your wishes in order to create unique renderings. A design office will accompany you in the realization of your 3D models.

A wide range of materials will enable you to carry out your projects both indoors and outdoors, as well as in establishments that are open to the public.

To study and create your customized project, contact us
